SUMMARY

Software Developer with 2+ years of experience modernizing, testing, debugging, and supporting web applications using C#/.NET, React, Python, SQL, REST APIs, and Microsoft Azure. Experienced in reducing technical debt, improving application performance, and contributing through code reviews, CI/CD, automated testing, documentation, and AI-assisted development.

PROFESSIONAL EXPERIENCE

Applications Developer Aug 2025 – Sept 2026
Pulse Alert *Hamilton, ON*

- Took ownership of a monolithic ASP.NET Core application, becoming a key production support resource while delivering features and improvements across C#/.NET, SQL Server, Cosmos DB, REST APIs, React/TypeScript, and Azure.
- Modernized tightly coupled application code by separating shared configuration, services, and data-access logic into smaller, maintainable modules.
- Reduced database calls from 300+ to 3 per 100 users using targeted queries, slim projections, and lazy-loaded detail data.
- Strengthened testing and delivery by adding xUnit tests, integration validation, GitHub Actions CI/CD, and a dedicated preproduction environment before release.
- Collaborated with staff, developers, and external partners through code reviews, feedback, and documentation to clarify requirements and improve application workflows.
- Supported staff and business users directly, troubleshooting application and basic IT issues while communicating clearly with technical and non-technical stakeholders.

Software Developer (Co-op) May 2024 – Sept 2024
Seradex Inc. *Burlington, ON*

- Participated in code reviews and stand-ups, incorporating feedback while independently resolving JavaScript and SQL application issues.
- Automated UI regression testing with TestComplete to reproduce business workflows and catch defects before deployment.

Application Developer (Co-op) Sept 2023 – Dec 2023
City of Hamilton, Corporate Services *Hamilton, ON*

- Worked directly with staff to identify pain points and clarify requirements, turning feedback into application improvements and user guides.
- Resolved user-reported issues by reproducing defects, validating database-backed functionality, implementing fixes, and coordinating deployment.

PROJECTS

PulseCareLink - Full-Stack Healthcare Web Platform Aug 2025 – Sept 2026
React 19 | TypeScript | FastAPI | .NET 9 | PostgreSQL | Cosmos DB | SQL Server | Docker | Azure

- Translated stakeholder needs into technical requirements, API contracts, frontend workflows, acceptance criteria, and implementation plans.
- Built and integrated React/TypeScript features with FastAPI and .NET services using REST APIs, authentication, validation, and relational/NoSQL data stores.
- Validated releases through xUnit, integration, API, frontend, and user-acceptance testing before production rollout.
- Supported CI/CD, preproduction, production releases, and post-release maintenance, incorporating user feedback and documenting workflows, architecture, deployment, and troubleshooting.

TECHNICAL SKILLS

Languages: C#, TypeScript, JavaScript, Python, SQL, JSON, HTML/CSS
Frameworks: .NET 8/9, ASP.NET Core, Entity Framework Core, React 19, FastAPI, Azure Functions
Developer Tools: Visual Studio, VS Code, Cursor, Git, GitHub, GitHub Actions, Azure DevOps, Microsoft Azure, Docker, Application Insights, Postman, TestComplete
AI-Assisted Development: Cursor, structured prompt/verification workflows
Databases & Integration: SQL Server, PostgreSQL, Cosmos DB, Azure Table Storage, REST APIs, JSON, WebSockets, Keycloak OIDC
Testing: xUnit, Unit Testing, Integration Testing, API Testing, UI Automation, User Acceptance Testing

EDUCATION

Mohawk College Sept 2021 – Feb 2025
Computer System Technology - Software Development (Co-op) *Hamilton, ON*
Dean's Honor List
